**Tropical Food: Chemistry and Nutrition** George Inglett 2012-12-02 Tropical Foods: Chemistry and Nutrition, Volume 1 covers the proceedings of an international conference on Tropical Foods: Chemistry and Nutrition, held in Honolulu, Hawaii on March 28-30, 1979. It is organized into 18 chapters that focus on the progress in the chemistry and nutrition of tropical foods. After briefly discussing a variety of foods harvested in the Pacific region, this book examines food's sensory characteristics for food quality determination, such as color and appearance, aroma, taste, and texture. The subsequent chapters focus on papaya fruit; the composition of seed; and the chemical and biochemical changes during processing and storage. The book also explains the occurrence, biosynthesis, and pharmacological properties of macrocyclic piperidine and piperidine alkaloids. A chapter describes the chemical and physical changes in harvested fruits at various maturities and their relation to fruit quality, with emphasis on prickly pear. This is followed by discussions on varieties of citrus, avocados, and mangoes of the southern United States and flavor characteristics of muscadine grape and guava. Methods such as solar drying technology, juice extraction processes, and industrial methods of oxygen removal from grapefruit concentrate are also discussed. This book also covers the regulation of terpenoid contents of citrus fruits. Considerable chapters present the production of sugar; cereals from various sources; and non-wheat flours and starches as bread supplements. The concluding chapters examine the nutritional value and toxic properties of yam and the

acridity and raphides content of aroid root crops. A discussion on the high effectivity of water-insoluble endosperm pentosan of rye and wheat for bread production is included. This book is an invaluable resource for food scientists, technologists, and manufacturers; students; and those interested in the field.

**Fragment-Based Drug Discovery** Steven Howard 2015-07-03 Fragment-based drug discovery is a rapidly evolving area of research, which has recently seen new applications in areas such as epigenetics, GPCRs and the identification of novel allosteric binding pockets. The first fragment-derived drug was recently approved for the treatment of melanoma. It is hoped that this approval is just the beginning of the many drugs yet to be discovered using this fascinating technique. This book is written from a Chemist's perspective and comprehensively assesses the impact of fragment-based drug discovery on a wide variety of areas of medicinal chemistry. It will prove to be an invaluable resource for medicinal chemists working in academia and industry, as well as anyone interested in novel drug discovery techniques.

Drug Discovery and Drug Development Madhu Dikshit 2021-02-10 Over the years, India has attained a prominent global position in the manufacture of Generic Drugs. This success can be attributed to its synthetic organic chemistry and chemical engineering strengths, nurtured by the timely policies of the Government of India. However, breakthrough successes in New Drug Discovery have remained elusive, despite the brilliant and sustained efforts of many Indian researchers and Pharma establishments. The Indian National Science Academy thought it appropriate to document India's New Drug Discovery Research (NDDR) journey to date. Gathering contributions from prominent researchers in the Indian Pharma Industry and Academia, this book highlights their efforts, achievements, and the status quo of Indian NDDR.

**Quality Control in the Food Industry** S Herschdoerfer 2012-12-02 *Quality Control in the Food Industry*, Volume 1 focuses on the general aspects of quality control in the food industry, emphasizing the controllable factors that affect the quality of the finished product, including the selection of raw materials, processing methods, packaging, storage, and distribution. The book describes the principles of quality control and some important concepts such as sensory assessment and statistical approaches, along with food standards and health problems in quality control. This volume is organized into six chapters and begins with an overview of the application, organization, related problems, techniques, and prospects of quality control. The next chapters focus on the chemical and microbiological aspects of health problems in quality control; fundamental concepts in statistics as applied to quality control from sampling to the estimation of ingredients; and taste testing as an approach to quality control of processed foods. The book concludes by considering the importance, limitations, and problems associated with food standards, with special reference to their international aspects. This book will be of interest to food scientists and technologists, managers in the food industry, and students.

*Beverages, Volume I: Chemistry and Technology* contains the proceedings of the second International Flavor Conference held in Athens, Greece, on July 20-24, 1980. The conference presents findings of 105 scientists from 20 countries on the chemistry and technology underlying the quality of foods and beverages. This volume is composed of 26 papers presented in the conference. It encompasses topics on the future of the flavor industry; interactions of flavor compounds with food components; interaction of cyclodextrins with taste substances; some aspects of the chemistry of naturally occurring pyrazines; and the taste and flavor enhancing properties of hydrolyzed protein. It also describes the molecular approaches to sweetness quantitation; flavor potentiating properties of thaumatin; flavor quality of ginger powders; and flavor recovery from mushroom blanching water. Additionally, this volume discusses quality, particularly, flavor of alcoholic beverages, wheat, bread, Queso Blanco, fruit, citrus juices, and cheese. This book provides a comprehensive research reports on numerous chemical and technological facets of the quality of foods and beverages to all practitioners involved.
