Environmental Medicine Institute of Medicine 1995-05-28 People are increasingly concerned about potential environmental health hazards and often ask their physicians questions such as: "Is the tap water safe to drink?" "Is it safe to live near power lines?" Unfortunately, physicians often lack the information and training related to environmental health risks needed to answer such questions. This book discusses six competency based learning objectives for all medical school students, discusses the relevance of environmental health to specific courses and clerkships,

and demonstrates how to integrate environmental health into the curriculum through published case studies, some of which are included in one of the book's three appendices. Also included is a guide on where to obtain additional information for treatment, referral, and follow-up for diseases with possible environmental and/or occupational origins.

Wildlife Ecotoxicology John E. Elliott 2011-08-27 Many books have now been published in the broad field of environmental toxicology. However, to date, none of have presented the often fascinating stories of the wildlife science, and the steps along the way from discovery of problems caused by environmental pollutants to the regulatory and non-regulatory efforts to address the problems. This book provides case by case examinations of how toxic chemical effects on wildlife have brought about policy and regulatory decisions, and positive changes in environmental conditions. Wild animal stories, whether they are about the disappearance of charismatic top predators, or of grossly deformed embryos or frogs, provide powerful symbols that can and have captured the public's imagination and have resulted in increased awareness by decision makers. It is the intent of this book to present factual and balanced overviews and summaries of the science and the subsequent regulatory processes that followed to effect change (or not). We cover a variety of chemicals and topics beginning with an update of the classic California coastal DDT story of eggshell thinning and avian reproduction to more recent cases, such as the veterinarian pharmaceutical that has brought three

species of Asian vultures to the brink of extinction. Researchers, regulators, educators, NGOs and the general public will find valuable insights into the processes and mechanisms involved both in environmental scientific investigation and in efforts to effect positive change. Motorized Obsessions Paul R. Josephson 2007-08-22 From dirt bikes and jet skis to weed wackers and snowblowers, machines powered by small gas engines have become a permanent--and loud--fixture in American culture. But fifty years of high-speed fun and pristine lawns have not come without cost. In the first comprehensive history of the small-bore engine and the technology it powers, Paul R. Josephson explores the political, environmental, and public health issues surrounding one of America's most dangerous pastimes. Each chapter tells the story of an ecosystem within the United States and the devices that wreak havoc on it--personal watercraft (PWCs) on inland lakes and rivers; all-terrain vehicles (ATVs) in deserts and forests; lawn mowers and leaf blowers in suburbia. In addition to environmental impacts, Josephson discusses the development and promotion of these technologies, the legal and regulatory efforts made to improve their safety and environmental soundness, and the role of owners' clubs in encouraging responsible operation. Synthesizing information from medical journals, recent environmental research, nongovernmental organizations, and manufacturers, Josephson's compelling history leads to one irrefutable conclusion: these machines cannot be operated without loss of life and loss of habitat.

Year of the Cow Jared Stone 2015-04-28 This is the story of a man, a cow, and a question: What am I eating? After realizing he knew more about television on his wall than the food on his plate, award-winning TV producer and amateur chef Jared Stone buys 420 pounds of beef directly from a rancher and embarks on a hilarious and inspiring culinary adventure. With the help of an incredibly supportive wife and a cadre of highly amused friends, Jared offers a glimpse at one man's family as they try to learn about their food and ask themselves what's really for dinner. *Year of the Cow* follows the trials and tribulations of a home cook as he begins to form a deeper relationship with food and the environment. From meeting the rancher who raised his cow to learning how to successfully pack a freezer with cow parts, Stone gets to know his bovine and delves into our diets and eating habits, examining the ethnography of cattle, how previous generations ate, why environmentalists and real food aficionados are mad for grass-fed beef, why certain cuts of beef tend to end up on our plates (while boldly experimenting with the ones that don't), and much more. Over the course of dozens of nose-to-tail meals, Jared cooks his way through his cow armed with a pioneering spirit and a good sense of humor. He becomes more mindful of his diet, makes changes to his lifestyle, and bravely confronts challenges he never expected—like how to dry beef jerky without attracting the neighborhood wildlife to the

backyard, and how to find deliciousness in the less-common cuts of meat like the tongue and heart—sharing a recipe at the end of each chapter. By examining the food that fuels his life and pondering why we eat the way we do, Jared and his family slowly discover to how live a life more fully—and experience a world of culinary adventures along the way.
