Alternative Medicines J. Warren Salmon

2022-08-12 Originally published in 1984, and now reissued with a new Preface, this was the first systematic and evaluative investigation of the

holistic health movement – the first to put its contribution and limitations in both historical and current perspectives. The book answers two essential questions: how do alternative medicines challenge the tenets of conventional scientific medicine; and could a synthesis of these alternative medicines and scientific medicine lead to a reformulation of conceptions of healing? A historical survey of medical care up to the use of scientific medicine in the 19th and 20th Centuries is followed by chapters on different traditions of alternative medicine: homeopathy, chiropractic, non-medical and spiritual healing, oriental medicine and self-care. Each considers the historical roots and development of the particular alternative medicine; describes its principles and how they relate to mainstream medicine. The concluding chapter considers social policy implications and political issues.

SARS 2004-01-01 SARS is a newly identified human infection caused by a corona virus unlike any other known human or animal virus in its family. The analysis of epidemiological information obtained from the sites of the outbreaks of SARS is still underway but the overall case fatality ratio is known to approach 11% although the rate among the elderly is much higher. Currently the major challenges for the treatment of SARS are: the source of the SARS virus and mode of transmission are still not well understood; there are problems with diagnostic tools; there is no effective treatment; and there is no vaccine for SARS. The above-mentioned difficulties and challenges have motivated national authorities health workers and scientists to explore the potential of complementary treatment. The results of research on integrated treatment with TCM and Western medicine showed that it is safe and that it also has some potential clinical benefits.

Therefore the experts suggested that records of such experience could serve as reference material for treatment of SARS in the future. This publication is intended to share experience in the complementary treatment of SARS patients; share the experience of clinical studies in the field of traditional medicine for treatment of SARS between the physicians and researchers; and to further encourage and promote the quality of research in the field of traditional medicine.
