Improving Health in the Community Institute of Medicine 1997-05-21 How do communities protect and improve the health of their populations? Health care is part of the answer but so are environmental protections, social and educational services, adequate nutrition, and a host of other activities. With concern over funding constraints, making sure such activities are efficient and effective is becoming a high priority. *Improving Health in the Community* explains how population-based performance monitoring programs can help communities point their efforts in the right direction. Within a broad definition of community health, the committee addresses factors surrounding the implementation of performance monitoring and explores the "why" and "how to" of establishing mechanisms to monitor the performance of those who can influence community health. The book offers a policy framework, applies a multidimensional model of the determinants of health, and provides sets of prototype performance indicators for specific health issues. *Improving Health in the Community* presents an attainable vision of a process that can achieve community-wide health benefits.

Foundations of School and Community Health Education Jolynn Gardner 2015 Even though the definition of curriculum has changed due to the social forces and the continuous query of what schools, community health organizations, and health educators should accomplish, the process of curriculum development has remained relatively unchanged. The constant processes of analysis, design, implementation, and evaluation have contributed to the establishment of a process-oriented structure in curriculum planning. Consequently, curriculum planners have been able to apply this process to improve their own processes of setting goals, plan learning experiences, select program content, and assess outcomes of the school or community health program.

Health Promotion in Medical Education Ann Wylie 2018-05-08 Health promotion has been a relatively overlooked area in modern medical and health professional vocational curricula. This practical and informative book aims to redress the balance towards health promotion being a visible, integrated curricular component, with agreed principles on quality in health promotion teaching across various faculties. Experienced and enthusiastic writers with expertise in health promotion, public health and medical education explore how curricular structures can accommodate the discipline, providing examples of teaching sessions and methods of teaching health promotion within integrated curricula. 'Do not fear another dry discussion of how to stop patients smoking! This book takes a stimulatingly lateral view of the scope of the subject, goes a very long way to showing why it is essential to medical education, and gives good advice on how to support and develop both the subject and its tutors in today's medical schools.' From the Foreword by Amanda Howe.

Communities in Action National Academies of Sciences, Engineering, and Medicine 2017-04-27 In the United

States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. *Communities in Action: Pathways to Health Equity* seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.

Evaluating Public and Community Health Programs Muriel J. Harris 2010-01-28 Evaluating Public and

Community Health Programs Evaluating Public and Community Health Programs combines an introduction to public and community health program evaluation with a detailed survey of methods in community assessment, planning, program design, quantitative and qualitative data collection, data analysis, and reporting of findings. The book presents an approach built on the two primary evaluation frameworks that are most common in public and community health: the Donaldson three-step program theory-driven evaluation model and CDC's six-step Framework for Program Evaluation in Public Health. The author emphasizes practical, ongoing evaluation strategies that involve all program stakeholders, not just evaluation experts, and presents a simple

and effective standards-based four-step model that will produce rich and useful results. The book's resources (scenarios, worksheets, and guidelines) can be used throughout the planning, implementation, and evaluation process. In addition, each chapter includes a list of learning objectives, key terms, and ideas for review, as well as summaries and discussion questions that can reinforce each chapter's lessons.

Designing Interventions to Promote Community Health: A Multilevel, Stepwise Approach Leslie Ann Lytle

2022-03-08 This book articulates a clear four-phase framework for planning, creating, implementing, and evaluating multilevel community health promotion interventions that target individual, physical, and social environments. It breaks down each of the four phases into detailed yet easy-to-follow steps that review important procedures, like identifying a behaviorally based problem within a community, identifying the underlying behavioral determinants to be targeted by the intervention, selecting intervention techniques that target those determinants, and evaluating outcomes to modify the intervention as needed. Guidelines for engaging community members in the design process, building teams, developing a manual of procedures, conducting pilot studies, and other important intervention components are also reviewed. Also reviewed are instructions for applying this framework to the adaption of existing interventions to new contexts. Feature boxes highlight key information and practical takeaways for students and interventionists. Detailed case examples that highlight various health promotion efforts bring the four-phase framework to life, including a recurring example about reducing consumption of sugar-sweetened beverages in middle-school students that follows the process from beginning to end.

Community-Based Health Literacy Interventions National Academies of Sciences, Engineering, and Medicine 2018-06-10 In its landmark report, Health Literacy: A Prescription to End Confusion, the Institute of Medicine noted that there are 90 million adults in the United States with limited health literacy who cannot fully benefit from what the health and health care systems have to offer. Since the release of that report, health literacy has become a vibrant research field that has developed and disseminated a wide range of tools and practices

that have helped organizations, ranging in size from large health care systems to individual health care providers and pharmacists, to engage in health literate discussions with and provide health literate materials for patients and family members. Improving the health literacy of organizations can be an important component of addressing the social determinants of health and achieving the triple aim of improving the patient experience, improving the health of populations, and reducing the cost of care. However, the focus on organizations does not address the larger issue of how to improve health literacy across the U.S. population. To get a better understanding of the state of community-based health literacy interventions, the Roundtable on Health Literacy hosted a workshop on July 19, 2017 on community-based health literacy interventions. It featured examples of community-based health literacy programs, discussions on how to evaluate such programs, and the actions the field can take to embrace this larger view of health literacy. This publication summarizes the presentations and discussions from the workshop.
