Rhythms of the Brain Gyorgy Buzsaki 2006-08-03 This book provides eloquent support for the idea that spontaneous neuron activity, far from being mere noise, is actually the source of our cognitive abilities. In a sequence of "cycles," György Buzsáki guides the reader from the physics of oscillations through neuronal assembly organization to complex

cognitive processing and memory storage. His clear, fluid writing-accessible to any reader with some scientific knowledge-is supplemented by extensive footnotes and references that make it just as gratifying and instructive a read for the specialist. The coherent view of a single author who has been at the forefront of research in this exciting field, this volume is essential reading for anyone interested in our rapidly evolving understanding of the brain.

Skeletal Tissue Mechanics R. Bruce Martin

2015-10-29 This textbook describes the biomechanics of bone, cartilage, tendons and ligaments. It is rigorous in its approach to the mechanical properties of the skeleton yet it does not neglect the biological properties of skeletal tissue or require mathematics beyond calculus. Time is taken to introduce basic mechanical and biological concepts, and the approaches used for some of the engineering analyses are purposefully limited. The book is an effective bridge between engineering, veterinary, biological and medical disciplines and will be welcomed by students and researchers in biomechanics, orthopedics, physical anthropology, zoology and veterinary science. This book also: Maximizes reader insights into the mechanical properties of bone, fatigue and fracture resistance of bone and mechanical adaptability of the skeleton Illustrates synovial joint mechanics and mechanical properties of ligaments and tendons in an easy-to-understand way Provides exercises at the end of each chapter

Logistics Transportation Systems MD Sarder 2020-10-17 Logistics Transportation Systems compiles multiple topics on transportation logistics systems from both qualitative and quantitative perspectives, providing detailed examples of real-world logistics workflows. It explores the key concepts and problem-solving techniques required by researchers and logistics professionals to effectively manage the continued expansion of logistics transportation systems, which is expected to reach an estimated 25 billion tons in the United States alone by 2045. This book provides an ample understanding of logistics transportation systems, including basic concepts, in-depth modeling analysis, and network analysis for researchers and practitioners. In addition, it covers policy issues related to transportation logistics, such as security, rules and regulations, and emerging issues including reshoring. This book is an ideal guide for academic researchers and both undergraduate and graduate students in transportation modeling, supply chains, planning, and systems. It is also useful to transportation practitioners involved in planning, feasibility studies, consultation and policy for transportation systems, logistics, and infrastructure. Provides real-world examples of logistics systems solutions for multiple transportation modes, including seaports, rail, barge, road, pipelines, and airports Covers a wide range of business aspects, including customer service, cost, and decision analysis Features key-term definitions, concept overviews, discussions, and analytical problem-solving

Global Waves of Debt M. Ayhan Kose 2021-03-03

The global economy has experienced four waves of rapid debt accumulation over the past 50 years. The first three debt waves ended with financial crises in many emerging market and developing economies.

During the current wave, which started in 2010, the increase in debt in these economies has already been larger, faster, and broader-based than in the previous three waves. Current low interest rates mitigate some of the risks associated with high debt. However, emerging market and developing economies are also confronted by weak growth prospects, mounting vulnerabilities, and elevated global risks. A menu of policy options is available to reduce the likelihood that the current debt wave will end in crisis and, if crises do take place, will alleviate their impact.

Handbook of Mould, Tool and Die Repair Welding S

Thompson 1999-10-15 This book covers an

important and frequently overlooked area of welding - the repair of moulds, tools and dies.

Because two rather different trades overlap in this process - welding and toolmaking, the materials and techniques involved have tended to be obscured.

For many years, toolmakers and tool users have had to rely on the small number of specialist welders who do understand exactly what welding repair involves and have the skills to carry it out.

Understanding the technical side of tool steels is frequently a problem for welders and understanding the practical side of welding can be a problem for machinists. This book has been written so that specialists from both sides can get to grips with the techniques and procedures involved. The Handbook of mould, tool and die repair welding is designed to save companies time and money by:

Acting as a training aid so that repairs can be carried out in-house Reducing the need to send work out and the costs involved Reducing the production time lost when repairs are required Providing clear diagrams and a user-friendly style to make the techniques easily understood It is an essential resource for Tool Room Managers and Foremen as

well as maintenance and repair welding specialists.

The Future of the Internet--And How to Stop It

Jonathan Zittrain 2008-10-01 This extraordinary
book explains the engine that has catapulted the
Internet from backwater to ubiquity—and reveals
that it is sputtering precisely because of its runaway
success. With the unwitting help of its users, the
generative Internet is on a path to a lockdown,
ending its cycle of innovation—and facilitating
unsettling new kinds of control. iPods, iPhones,
Xboxes, and TiVos represent the first wave of
Internet-centered products that can't be easily
modified by anyone except their vendors or
selected partners. These "tethered appliances" have
already been used in remarkable but little-known
ways: car GPS systems have been reconfigured at
the demand of law enforcement to eavesdrop on the
occupants at all times, and digital video recorders
have been ordered to self-destruct thanks to a
lawsuit against the manufacturer thousands of miles
away. New Web 2.0 platforms like Google mash-
ups and Facebook are rightly touted—but their
applications can be similarly monitored and
eliminated from a central source. As tethered
appliances and applications eclipse the PC, the very
nature of the Internet—its "generativity," or
innovative character—is at risk. The Internet's
current trajectory is one of lost opportunity. Its
salvation, Zittrain argues, lies in the hands of its
millions of users. Drawing on generative
technologies like Wikipedia that have so far
survived their own successes, this book shows how
to develop new technologies and social structures
that allow users to work creatively and
collaboratively, participate in solutions, and become
true "netizens."

National Agenda for Motorcycle Safety United States. National Highway Traffic Safety Administration 2000

Universal Service Milton Mueller 1997 Universal service is a focal point of telecommunications policy in the 1990s, not only in the United States, but in every other country that has begun to liberalize or deregulate its telecommunications industry. The new policy dialogue revolves around four questions. First, how much do the universal service obligations of incumbent telephone companies cost? Second, how can those costs be financed in a competitive environment? Third, what kind of technical and pricing arrangements should be made to interconnect incumbent telephone companies with the new, competing networks? Finally, should the service bundle designated as "universal service" be redefined to take into account new technologies, and if so, how? In the United States, debate over those issues reached a milestone when the U.S. Congress passed the Telecommunications Act of 1996. The new law is the first comprehensive revision of the Communications Act of 1934 and culminates twenty years of legislative struggle over how to adapt federal law to the new realities of telecommunications. In effect, the new law codifies the perceived wisdom about interconnection, competition, and universal service in telecommunications. Because one of the chief purposes of Milton Mueller's analysis is to mount a historically grounded challenge to that orthodoxy, the new law provides the perfect foil for a critique that links the historical and contemporary policy debates over universal service.

Weapons of Math Destruction Cathy O'Neil 2016-09-06 NEW YORK TIMES BESTSELLER • A former Wall Street quant sounds the alarm on Big Data and the mathematical models that threaten to rip apart our social fabric—with a new afterword "A manual for the twenty-first-century citizen . . . relevant and urgent."—Financial Times NATIONAL BOOK AWARD LONGLIST •

NAMED ONE OF THE BEST BOOKS OF THE YEAR BY The New York Times Book Review • The Boston Globe • Wired • Fortune • Kirkus Reviews • The Guardian • Nature • On Point We live in the age of the algorithm. Increasingly, the decisions that affect our lives—where we go to school, whether we can get a job or a loan, how much we pay for health insurance—are being made not by humans, but by machines. In theory, this should lead to greater fairness: Everyone is judged according to the same rules. But as mathematician and data scientist Cathy O'Neil reveals, the mathematical models being used today are unregulated and uncontrollable, even when they're wrong. Most troubling, they reinforce discrimination—propping up the lucky, punishing the downtrodden, and undermining our democracy in the process. Welcome to the dark side of Big Data.

Education for the Twenty-first Century : Issues and Prospects International Commission on Education for the Twenty-first Century 1998 Containing a selection of texts on education prepared during the work of the International Commission on Education for the Twenty-first Century, this volume bears witness to some paradoxes faced by education: to reconcile divergent aims and trends, to embody both continuity and renewal, to encourage conformity and innovation. These papers are intended to complement existing literature to respond to questions that arose in the course of the Commission's work, and to illuminate specific issues that cross disciplines.

Thinking about Deterrence Air University Press 2014-09-01 With many scholars and analysts questioning the relevance of deterrence as a valid strategic concept, this volume moves beyond Cold War nuclear deterrence to show the many ways in which deterrence is applicable to contemporary security. It examines the possibility of applying deterrence theory and practice to space, to cyberspace, and against non-state actors. It also examines the role of nuclear deterrence in the

twenty-first century and reaches surprising conclusions.

Political Crises, Social Conflict and Economic

Development Andrés Solimano 2005-01-01 Political Crises, Social Conflict and Economic Development is a rare attempt to undertake comparative political economy analysis of the Andean region and thus represents a welcome contribution. . . It is clearly written and will engage scholars interested in Latin America from a wide range of disciplines. Jonathan di John, *Journal of Agrarian Change* This collection of essays on the political economy of the Andean region goes to the heart of the struggle these smaller economies face in completing crucial reforms and achieving higher growth. Andrés Solimano has brought together the best and the brightest talent from each country, the result being the most compelling analysis ever of how enclave development and a historical dependence on primary exports renders these countries distinctly Andean. As the essays argue, the political solutions and economic remedies must address this phenomenon, rather than mimicking those strategies of the larger emerging market countries in the region. Carol Wise, University of Southern California, US The contributors to this authoritative volume analyze the impact of political crises and social conflict on economic performance in the Andean region of Latin America. The blend of theory and case studies is also relevant for understanding other complex societies in the developing world and transition economies. The book provides illuminating insights on how to understand, and survive, the complicated interactions between volatile politics, unstable democracies, violence, social inequality and uneven economic performance. Recent political economy theories are combined with valuable quantitative and qualitative information on presidential crises, breakdowns of democracy, constitutional reforms, quality of institutions, and social inequality and exclusion to understand actual country realities. Part I provides the conceptual framework and a regional

perspective of the book. Part II contains five political economy country studies Bolivia, Colombia, Ecuador, Peru and Venezuela written by leading scholars in the field and former senior policymakers, including a former President. Together, the chapters highlight the detrimental effects of political instability and social conflict on economic growth and stability, as well as the feedback effects from poor economic performance on political instability and institutional fragility. The country studies warn that narrow economic reforms that do not pay adequate attention to politics, institutions and social structures are bound to fail in bringing lasting prosperity and stability to complex societies. Examining new and rich information on episodes of political turmoil, military interventions, forced presidential resignations, constitutional reforms and social uprisings, this book will be required reading for all those interested in the interface of politics and economic development.

Accounting for the Public Interest Steven Mintz 2013-10-04 This volume explores the opportunities and challenges facing the accounting profession in an increasingly globalized business and financial reporting environment. It looks back at past experiences of the profession in attempting to meet its public interest obligation. It examines the role and responsibilities of accounting to society including regulatory requirements, increased emphasis on corporate social responsibility, accounting fraud and whistle-blowing implications, internationalization of public interest obligations, and providing the education needed to be successful. The book incorporates an ethical dimension in making these assessments. Its focus is a conceptual, theoretical one drawing on classical philosophy, the sociology of professions, economic theory, and the public interest dimension of accountants as professionals. The authors of papers are long-time contributors to the annual symposium on Research in Accounting Ethics sponsored by the Public Interest Section of the AAA.

The Philosophy of Manufactures Andrew Ure 1835

The Netherlands Indies and the Great War, 1914-1918 Kees van Dijk 2007-01-01 Kees van Dijk examines how in 1917 the atmosphere of optimism in the Netherlands Indies changed to one of unrest and dissatisfaction, and how after World War I the situation stabilized to resemble pre-war political and economic circumstances.

The Great Divergence Kenneth Pomeranz 2021-04-13 A landmark comparative history of Europe and China that examines why the Industrial Revolution emerged in the West The Great Divergence sheds light on one of the great questions of history: Why did sustained industrial growth begin in Northwest Europe? Historian Kenneth Pomeranz shows that as recently as 1750, life expectancy, consumption, and product and factor markets were comparable in Europe and East Asia. Moreover, key regions in China and Japan were no worse off ecologically than those in Western Europe, with each region facing corresponding shortages of land-intensive products. Pomeranz's comparative lens reveals the two critical factors resulting in Europe's nineteenth-century divergence—the fortunate location of coal and access to trade with the New World. As East Asia's economy stagnated, Europe narrowly escaped the same fate largely due to favorable resource stocks from underground and overseas. This Princeton Classics edition includes a preface from the author and makes a powerful historical work available to new readers.

Change and Resilience Miguel Ángel Cau Ontiveros 2019-06-30 Change and Resilience offers a view of the main Mediterranean islands from West to East in Late Antiquity because Mediterranean islands can contribute in fundamental ways to our understanding not only of earlier colonizations but also later periods. The volume explores specifically the time frame from the fall of the Roman empire to the Medieval period. A first group of papers covers islands and island groups in the Central and Western Mediterranean, including the Balearic Islands, Corsica, Sardinia, Sicily, and the Adriatic islands. Together, these five papers highlight several common themes across the region: local or indigenous sites were often reoccupied in Late Antiquity, the rural countryside typically played a significant role in the contributions of islands to wider Mediterranean economic networks, and islands — big and small — often played significant roles in shifting political and religious power. The second group focuses on the Eastern Mediterranean. Three papers cover a range of islands, including Crete, the Cyclades, and Cyprus. Together they emphasize the impacts external shifts in political power and economic ties in the Eastern Mediterranean had on island landscapes, as well as the connected relationship between sacred space and territorial occupation across many of these islands. The final group of papers pivots on changing perceptions of island landscapes in Late Antiquity — or — island mindscapes. — Three papers focus on how communities adapted as they underwent Christianization in island contexts, emphasizing the diverse and varied ways that island landscapes became — Christianized, — as well as

how other political and economic factors shaped the dynamics of change.
