**Mafioso, Big Business and the Financial Crisis** Ingyu Oh 1999 This study attempts to fill the gap between the patterns of state-business relation and the structure of conglomerate organizational forms. Taking the South Korean chaebol and the Japanese keiretsu as example cases, the author argues that the Mafioso state in each country was responsible for the rise of these two different conglomerate organizations. In South Korea, the Mafioso state was hostile to big business (top-down manifesto state), forcing the chaebol owners to contribute illegal extracts from normal business activities. The big business owners in return tried to cope with state hostility through diversification and size expansion (in other words, the chaebol). In Japan, the Mafioso state was not hostile to big business because both of them wanted to fend off external economic and political hostilities, mostly from the US (defeated manifesto state). Keiretsu managers voluntarily paid illegal extracts from normal business activities to the state, which in return protected such informal inter-firm alliances. The result was the keiretsu with diffused ownership and high levels of diversification.

*South Korean Engagement Policies and North Korea* Key-young Son 2006 A fresh historical and theoretical exploration of the much-debated, but still elusive, question of the Korean divide. In contrast to much of the literature on the divide, which deals with state-building on the two sides of the Demilitarized Zone, this book sheds light on the slow, but steady process of homogenization between the two estranged peoples, as accelerated after the end of the Cold War and especially after the inauguration of President Kim Dae-jung in 1998. Providing immense empirical detail as well as theoretical debate on the ideas in policy shaping in South Korea, the book presents a rich 'history of enemies' and covers issues including: an overview of the structural shift and the rise and fall of identity groups in South Korea

history of 'enemy-making' and 'peace-building' North Korea's external relations with the US, Japan and Europe Hyundai's groundbreaking, cross-border tourism and other economic cooperation projects the lingering nuclear weapons crises. By focusing on the question of identities, the book presents a new approach on one of the most important legacies of the Cold War and threat to peace in the contemporary world: the divided Korean peninsula. As such it fills a major gap in the literature, utilizing new theoretical and empirical frameworks to deal with the Korean division and its future implications in East Asia.

**Lemon-Aid New Cars and Trucks 2011** Phil Edmonston 2010-11-11 As U.S. and Canadian automakers and dealers face bankruptcy and Toyota battles unprecedented quality-control problems, Lemon-Aid guides steer the confused and anxious buyer through the economic meltdown unlike any other car-and-truck books on the market. Phil Edmonston, Canada's automotive "Dr. Phil" for more than 40 years, pulls no punches. In this all-new guide he says: Chrysler's days are numbered with the dubious help of Fiat. Electric cars and ethanol power are PR gimmicks. Diesel and natural gas are the future. Be wary of "zombie" vehicles: Jaguar, Land Rover, Saab, and Volvo. Mercedes-Benz - rich cars, poor quality. There's only one Saturn you should buy. Toyota - enough apologies: "when you mess up, 'fess up."

**Automotive Machining** Mike Mavrigian 2017-04-17 Machining is an essential part of high-performance engine building and stock rebuilding, as well as certain servicing procedures. Although you may not own the expensive tooling and machining to perform all or any of the machining required for a quality build, you need to understand the principles, procedures, and goals for machining, so you can guide the machining process when outsourced. Classic and older engines typically require extensive machining and almost every major component of engine, including block, heads, intake, crankshaft, and pistons, require some sort of machining and fitment. A detailed, authoritative, and thorough automotive engine-machining guide for the hard-core enthusiast has not been available until now. Mike Mavrigian, editor of Engine Building Professional, walks you through each important machining procedure. A stock 300-hp engine build has far different requirements than a 1,000-hp drag race engine, and Mavrigian reveals the different machining procedures and plans according to application and engine design. The author also shows you how to inspect, measure, and evaluate components so you can provide astute guidance and make the best machine work choices. Machining procedures included are cylinder boring, align boring/honing, decking, valveseat cutting, cam tunnel boring, and a multitude of other services. In addition, multi-angle valve jobs, setting the valveseats, altering rocker arm ratio, re-conditioning connecting rods, and machining and matching valvetrain components are also covered. Whether you're an enthusiast engine builder or prospective machining student who wants to pursue a career as an automotive machinist, this book will provide insight and in-depth instruction for performing the most common and important machining procedures.

**Kaesong Industrial Complex** Ŭl-ch'ul Im 2007 *Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles* National Research Council 2015-09-28 The light-duty vehicle fleet is expected to undergo substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles, will be well underway. What are these new technologies - how will they work, and will some technologies be more effective than others? Written to inform The United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA) Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits, and implementation issues of fuel reduction technologies for next-generation light-duty vehicles. Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles estimates the cost, potential efficiency improvements, and barriers to commercial deployment of technologies that might be employed from 2020 to 2030.
